

**Chapter 1 : 12 Fixes to Make iPhone Sync With Exchange Server | AkrutoSync**

*In Windows Live Mail, click Contacts to open Windows Live Contacts. Click the name of the person you want to send a message to, and then click the E-mail button in the toolbar. Windows Live Contacts creates a new message and adds the contact's name to the To field automatically.*

By Support Guides iPhone Sync with Outlook 6 Comments Exchange server is what many business owners use to sync Outlook calendar and contacts with their smartphones. Exchange server works like a connection point between your PC and smartphone. Thanks to Exchange ActiveSync technology added since Microsoft Exchange server , all synced devices can exchange data in a manner that prevents deleting, duplicating or corrupting data. The first step is identifying a problem. It could be the Exchange server misconfiguration as well as smartphone configuration issues. So let us start from general issues and move to more specific problems preventing iPhone from syncing with Exchange. If the other smartphone works better, the problem is with your iPhone. A new iOS release often causes a variety of problems, including calendar appointments synced through Exchange ActiveSync technology not showing up on iPhone. If have a great deal of data or media on your iPhone, and factory reset is not an option, then downgrading to the previous iOS version might be your best option. Another way to identify the problem is setting up another Exchange account on your iPhone and testing how it works with calendar. However, if the second account works without any issues, you may want to check syncing calendars is enabled in Exchange account of your smartphone. Also, recheck your credentials and make sure there are no extra spaces before and after your password. However, sometimes, due to misconfiguration, iPhone can connect to Exchange and pull data but fails to push any changes back to Outlook. This one-way syncing means that your calendar events will not be updated on your PC if you change or modify something on your smartphone. This may cause variety of problems, starting with missed meetings and ending with potential problems with your work. To fix this issue we recommend that you re-setup Exchange account and ensure you have enabled syncing everything you need i. It would be better if you could do it using an Android or Windows Phone device. If the second smartphone transfers data two-way without any problems, the problem is in your smartphone and Apple will definitely release an update in the near future to fix the issue. If both, iOS and Android devices are not able to send data to Outlook through Exchange server, skip to the bottom of this page where we describe how you can reconfigure your server to enable two-way synchronization for all connected devices. If you are not that tech-savvy, ask your IT team to help you out, or you can use AkrutoSync to sync an unlimited number of devices with your desktop Outlook via Wi-Fi or over the Internet. Now it seems that even iCloud cannot sync Outlook notes with iPhone due to this peculiar Apple policy of throwing Outlook users into the hell of migrating to other online services to manage their notes. If you are reading this section, then it means that your Exchange server has problems with syncing notes with your iPhone. With this software you can have your own Exchange server for syncing notes as well as calendars, contacts and tasks between your iPhone and Outlook. It takes 5 minutes to start syncing notes over Wi-Fi. Confirm your email provider uses Exchange ActiveSync technology. Most common providers have this option, but it could be your cause. Another possible workaround is deleting your exchange email account and then re-adding it. However, while adding it back, do not create another Exchange account on your iPhone. If you then cancel the meeting at 3: In this case, making iPhone properly sync with Exchange server is easy. The only thing you need is to do is ensure your smartphone is always online and the sync schedule is relevant to the number of updates. To fix this issue follow these recommendations: Ensure iPhone is properly synced with PC where you have Outlook Use Silent mode instead of Airplane mode on your iPhone while meetings Make sure your iPhone is properly configured for a two-way sync with Exchange server If that does not fix your problems, try using AkrutoSync to transfer Outlook data to iPhone without Exchange server. It often happens when you have hundreds or even thousands of contacts and past calendar events in Outlook. Because the amount of data is so large, standard syncing methods can fail when transferring to your iPhone. Enable syncing one type of data at a time i. If that did not resolve the problem, try using AkrutoSync for syncing Outlook data without Exchange Server. However, you can experience issues of this

kind when your iPhone is not properly configured to sync two-way with Exchange. Here are few hints to help you find a workaround: Ensure you have enabled syncing for all types of data in Exchange account settings on your phone. If you use 3-rd party apps, try switching to iOS native apps. In some cases you just need to wait a few minutes or even hours if you have a huge amount of data while Exchange server will finish transferring all the data to your smartphone. If that did not work, install AkrutoSync software and transfer all the data without using the Cloud. In this case, neither reinstalling Exchange account nor restarting Exchange server works. In some cases you can even sync mail and calendar but no contacts show up on iPhone. The first thing you need to do is to check if your contacts are actually on Exchange server. To do that, use Exchange Web Access. You can identify where is the problem by syncing another phone with your Exchange server. If syncing works, then the problem is in your iPhone. Another thing you should do is check OWA for your calendar events. Find your mobile device and delete it. Restart your iPhone. In some cases, syncing can be renewed immediately after deleting your iPhone from OWA. Add email address, password and description optional for your account and tap Next. Enable syncing mail, contacts, calendars, reminders and notes. From this point on, all of your contacts, calendars, tasks reminders, and notes will be synced with your iPhone. Click on View and Select Advanced Features. Select your mailbox that is not working with Active Sync. Double click on the account and select the Security Tab and then the Advanced Button. Select Exchange Servers, and tick the Include inheritable permissions toggle. Press Apply and OK.

### Chapter 2 : Business Email and Shared Calendars | Office

*In an e-mail message, a signature is a small amount of text that appears at the bottom of the message. Instead of typing this information manually, you can create the signature once and then have Windows Live Mail add the signature automatically to any message you send.*

Click Contacts folder, click Export button and select comma separated values. Click Next and select all the fields that you want to export, click Finish button and wait for the export process to be completed. If you are not sure about the information just select all the fields. This process can take some time, depending on the number of messages that you are exporting. Close Windows Live Mail. Select the Contacts folder, click File, select Open and then click Import. You can select some additional options to replace, duplicate, or do not import duplicated contacts. Click the Next button and then make sure that the Contacts folder is highlighted. If the Contacts folder is not highlighted, then select the Contacts folder and then click the Next button. Click Finish button and wait for the import process to be completed. Open Windows Live Mail. Visit the Windows Live Calendar webpage <http://www.windowslive.com/calendar>: Click the Share button and select the calendar that you want to export. Select the option Share this calendar. Put a check mark in the item topic Send people a view-only link to your calendar. You will see some links to share your calendar. Under the category Links that show event details, click ICS: Import into another calendar application. Select and copy the URL displayed without the webcal: ICS file on your Desktop. Repeat the steps 5 to 13 for each calendar that you want to export. After complete these steps your Windows Live Calendar settings from the webpage are saved as Shared. You can make the calendar private again following the steps 5 to 7 above. Close the Internet Explorer window after you save all the ICS files that you want. Click File, select Open and then the Import option. Select the option Import an iCalendar. ICS calendar file in your Desktop folder and then click Ok button. Click the Import button in the dialog box and wait for the import process to be completed. Repeat steps 17 to 20 for each calendar that you want to import.

### Chapter 3 : Windows Live e-mail calendar reminder not working - Microsoft Community

*If you have a memo, an image, or another document that you want to send to another person, you can attach the document to an e-mail message. The other person can then open the document after he or she receives your message.*

See which account your calendars are in: Open the Calendar app and tap an event to open it. Tap the calendar name to see if the event is in an iCloud calendar. Set an iCloud calendar as the default calendar: Tap a calendar under iCloud to make it your default. See which account your reminders are in: Open the Reminders app and tap the list name in the upper-left corner to view all your lists. See if the list is stored on your device or iCloud. Open a list and tap Edit. If you see Sharing, then your list is in iCloud. When you create a reminder, you can choose to store it in iCloud or on your iOS device. Check your app settings Make sure that your iCloud Contacts, Calendars, and Reminders are set to appear in the Contacts or Calendars app: Open the Contacts app and tap Groups in the upper-left corner. Make sure that All iCloud is selected. Open the Calendar app and tap the Calendars tab. Change how often your calendars and reminders update: If a specific timeframe is selected, choose All Events or All Reminders instead. Press the Home button. Wait a few minutes. Open the Calendar app, tap the Calendars tab, and swipe down to refresh. Since the iCloud Birthdays calendar updates daily, you might not see changes to birthdays in the Calendars app until the next day. Find the app, then swipe up to close it. Press the Home button to return to your Home screen. Wait a minute, then open the app again. Slide to turn off Contacts, Calendars, and Reminders. If not, choose Keep on My [device]. Restart your iPhone, iPad, or iPod touch Restart your device. Mac After each step, check your contacts, calendars, or reminders. Refresh your calendars and reminders You can refresh your calendars and reminders from the Calendars app: Open the Calendar app. Since the iCloud Birthdays calendar updates hourly, you might not see changes to birthdays in the Contacts or Calendars app for an hour. If you use multiple accounts on your Mac like iCloud, Gmail, and Yahoo, make sure that iCloud is your default Calendar account: On the General tab, make sure that one of your iCloud calendars is the default. After you set up iCloud Reminders, you might need to quit and reopen Reminders on your Mac. Then make sure that you set up your account correctly in Reminders: Open the Reminders app. Deselect Calendars and Reminders. Close System Preferences and wait about a minute.

### Chapter 4 : Sync basics - what you can and cannot sync - Office Support

*I went into theinnatdunvilla.com e-mail and the contact list with both e-mail accounts looks OK. I went back to Windows 10 Mail and still have same problem. Also another issue and maybe they are connected - If I try to compose an e-mail in theinnatdunvilla.com and I try to pull up addresses for the "To" line all I get is a blue box saying "My contacts" and I can.*

Rahul Saigal January 22, , 8: If not, you can add it manually in the Calendar app. Calendar supports a range of account types: Choose the type of account you want and follow the on-screen instructions. If you do not wish to see calendars from a particular account, then you can switch them off. The interface is divided into two sections: A compact calendar also appears at the left side. The left and right arrow keys go to the previous or next day, and the up and down arrow keys go to the previous or next hour. Adding a New Event or Appointment To enter a new event directly into your calendar, tap or click the correct time slot or date square. A small pane will appear for a new calendar entry on that date. Enter a name for your event. Select the beginning and ending time of your event. Enter the location and calendar account associated with it. This is a quick way for adding a calendar and most of the time, this is all you need. A big screen will pop up, allowing you to: To invite people, select the text field and start typing. Contacts will appear from your list of contacts in the People app. Choose the contact to add them to the event. You can invite someone by typing the email address too. If you mouse over an event, then a little box will pop out to show more detail, including the name of the event, location, starting date, and time. The entries you add to Calendar app will get synced to every Windows 10, Android, or iOS device you have, assuming that you have linked your accounts in those devices as well.

**Chapter 5 : Automatically set up an email account in Microsoft Outlook - 1&1 IONOS Help**

*Service. Mail. Contacts. Calendar. Tasks. Notes. Exchange. When you use a Microsoft Exchange account in Outlook, your e-mail messages, contacts, calendar events, and any other Microsoft Exchange folders are synchronized automatically.*

No Microsoft Exchange accounts The following table lists the Outlook items that synchronize and do not synchronize with the Exchange server.

Outlook item	Exchange server
Messages	All Exchange folders, including subfolders, can be accessed by using Outlook, and Outlook is continually synchronized with the Exchange server automatically. Outlook completes a check for new messages on the server once every minute.
Rules	If you have a Microsoft Exchange account managed by Microsoft Exchange Server or later, you can use Outlook for Mac to create and edit rules that are saved on the Exchange server. You cannot view or edit rules that are set to run only in Outlook for Windows. With a Microsoft Exchange account managed by Microsoft Exchange Server, you cannot use Outlook for Mac to edit or create rules that are saved on the Exchange server such as rules you created in Outlook for Windows. Rules that you create in Outlook for Mac are saved on your computer and run on messages only as they are synchronized with Outlook for Mac. For more information, see <a href="#">Create a rule in Outlook for Mac</a>
Contacts	All Exchange account contacts and contact folders in Outlook are continually synchronized with the Exchange server automatically.
Calendar events	All Exchange account calendars and their events in Outlook are continually synchronized with the Exchange server automatically.
Notes	Notes and notes folders are synchronized with the Exchange server.
Tasks	Tasks and tasks folders are synchronized with the Exchange server.
Follow up flags	Messages and contacts that have been flagged for follow up are synchronized with the Exchange server, along with due dates, start dates, reminder dates, and completed dates.
Categories	Category information that you apply to items in Outlook is synchronized with the Exchange server. However, colors associated with categories may vary between Outlook for Mac and Outlook for Windows. Your information is also available to any other applications that you use to connect to your Exchange server, such as Outlook for Windows. If you are using both Outlook for Mac and Outlook for Windows to access the same Microsoft Exchange account, you should be aware of some differences in how the two applications display information: In Outlook for Windows, you can store up to three e-mail addresses. When contacts are synchronized, Outlook for Mac synchronizes the default e-mail address with the E-mail field in Outlook for Windows. The next two addresses listed in the Outlook for Mac contact are synchronized with the E-mail 2 and E-mail 3 fields in Outlook for Windows. As a result, if you enter information in the Middle Name field, you will not be able to see that information in Outlook for Windows. Similarly, Outlook for Windows provides fields for contacts that are not in Outlook for Mac. To work around this issue, you can enter information in the Notes tab in Outlook for Mac, and that information is displayed in the Notes box in Outlook for Windows. For more information about how to add an account, see <a href="#">Add an email account to Outlook for Mac</a> . After that, there are two synchronization options: But you can maintain the connection to only one folder at a time. You can also create schedules that synchronize your subscribed folders in Outlook with the IMAP mail server.

**Chapter 6 : Contact - 7-Eleven Corporate**

*If you add an theinnatdunvilla.com account to Mail for Windows 10, your theinnatdunvilla.com contacts are automatically stored in the People app. Send an email to a contact stored in the People app If you know the contact's name or email address, you can start typing the first few letters of their name or email address and Mail for Windows 10 will suggest.*

Follow the steps below to send an iPhone calendar invite to a group of contacts using your iPhone calendar app. You can easily share calendar events with all your contacts after you first create an event with your iPhone calendar. When you create a group invite on your iPhone, you can add contacts from other email accounts such as Gmail. You can also specify a time, place, or mode of transportation, and create alerts using event creation on your iPhone calendar. Tap once to select the date of your event, then tap the plus icon on the upper right hand corner. Enter the name of your event and location. Select the start and end times of the event. You can also include how long it will take to get to your location by selecting Travel Time. Toggle the Travel Time button to green and select your approximate travel time. Set an alarm for your event by tapping Alert. From there, you can select how far in advance you want your alarm to go off. To complete event creation, tap Add in the upper right hand corner. You can view responses by opening the event on your calendar. When you are creating a new event, tap Invitees. Tap the plus sign in the upper right-hand corner to see a list of all your iCloud contacts. You can type in a specific name or scroll through your contacts. You can add as many Invitees as you want. To finish adding Invitees to your event, tap Done in the upper right-hand corner and return to New Event. Finally, tap Add in the upper right-hand corner. If you are adding Invitees to a previously created event, navigate to your Calendar and select the date of your event. Locate your event and tap. Tap Edit in the upper right-hand corner. Scroll down to Invitees and tap. Add your contacts as normal. You can follow these steps for any email account you have to add all of your contacts. These steps will also allow you to share the event on your Gmail Calendars, as well as post the event to your personal iPhone calendar. To add a new email account to your iPhone: Open the Settings app. Scroll down and select Contacts. Under Accounts, tap Add Account. Enter your email address, and tap Next. Enter your password, and tap Next. Make sure that Mail, Contacts, and Calendars are all toggled to Green. Finally, tap Save in the upper right-hand corner. Now all of your contacts from that email are available on your iPhone. You can return to your previously created event and add additional Invitees by following the steps previously described in How To Share Calendar Event via iCloud. Master your iPhone in one minute a day:

**Chapter 7 : How do I contact theinnatdunvilla.com? - ABC News**

*I want to backup my Windows Live Mail address book or contacts but I could not find its folder. I thought it would be at C:\Users\User name\AppData\Local\Microsoft\Windows Live Contacts\{36 characters folder name} but this folder is empty.*

Outlook will periodically check the Google Calendar for updates, and if any new or modified events are found, they will be downloaded and displayed alongside with your Outlook appointments. If you are logged into your Gmail account, then you will need two clicks instead of one. Anyway, click on the Apps launcher icon and select Calendar from the list of apps. Hover over the needed calendar in the calendar list at the left-hand part of the screen, click the drop-down arrow that appears to the right of the calendar name, and then click Calendar settings. This will open the Calendar details page. Now you can paste this URL into any other application that supports the iCal format. Synchronizing with Outlook , and Method 1: Click Open Calendar button and choose "From Internet" from the drop down list. On the File tab, select Account Settings twice. Switch to the Internet Calendars tab and click the New button. Click Close to close the Accounting Settings dialog. In the Subscriptions Option dialog box, type the folder name for the imported calendar and make sure the Update Limit checkbox is selected. If you want to transfer the attachments within your Google Calendar events, select the corresponding option too and then click OK. Your Google calendar has been added to Outlook and you can see it under "Other Calendars". Changes made in Outlook are not synced with your Google Calendar. If you want to send the changes back to Google Calendar, you need to export your Outlook Calendar. And on 1 August , our good old Google Calendar Sync has finally come to an end, alas. Initially, this section contained a backup download link for Google Calendar Sync and instructions on how to make it work with new versions of Outlook and But since all that stuff is of no use any longer, we have removed it. Even if you find it somewhere else, it would be of no avail because Google Calendar Sync has stopped functioning altogether. So, what alternative does Google offer to us now? This new sync app supports all versions of Outlook , , , and Outlook and automatically syncs e-mail, contacts and calendars between Outlook and Google apps servers. A fly in the ointment is that Google Apps Sync is available only for paid accounts as well as for Google Apps for Business, Education, and Government users. If you are one of those lucky customers, you may find the following resources helpful: Download Google Apps Sync for Outlook - on this page you can find the latest version of Google Apps Sync and watch an introductory video that will help you quickly get started with this plug-in. Free tools and services to sync Google Calendar with Outlook In this section, we are going to look into some free tools and services and see what benefits they provide. SynqYa - free web service to synchronize calendars and files You may consider using this free service as an alternative way to handle your Google and Outlook calendar synchronization. A really nice feature is that it allows two-way syncing, i. Synchronizing between Google and iPhone is also supported, which adds one more argument in favor of SynqYa. The sync process is pretty straightforward and requires just two steps: Sign up for a free synqYa account. Authorize access to your Google calendar. Calendar Sync for Outlook and Google - free 1-way and 2-way syncing Calendar Sync is free software to sync Outlook appointments with Google events. It also lets you delete duplicate items in Outlook and Google calendars. Outlook , , and are supported. The following screenshot demonstrates how to configure the syncing settings: Paid tools to sync Outlook and Google calendars Updated on 1-Aug Initially, I did not plan to include any commercial tools in this article. But now that the former top player Google Calendar Sync is out of the game, it probably makes sense to review some paid tools as well, and see how they compare to each other. Below you will find a quick overview of the syncing tool that I tried personally. I will probably add some more tools in the future if you find this info useful. CompanionLink for Google This application can synchronize calendars, contacts and tasks between Outlook and Google and lets you select the categories to be synced. Also, it does support syncing of multiple calendars, which is a big plus. The tool works with all versions of Outlook - The configurations process is very straightforward and you will hardly need any guidance. I will just point out a few key steps and features below. To start configuring, you can click on the Settings icon in the

CompanionLink group on the Add-ins ribbon tab in Outlook, or click the CompanionLink icon on the desktop, or find it in the programs list. First off, select what devices you want to synchronize naturally this is Outlook and Google in our case: Now you choose what items calendars, contacts, tasks you want to sync and whether it shall be one-way or two-way syncing. To do this, click the Settings button under Microsoft Outlook and you will see the following options: Clicking the Settings button under Google will display the "Google Settings" dialog where you enter your Gmail credentials and choose what calendars to sync - the default one, selected, or all. And finally, you can click the Advanced button in the lower-left corner of the Settings window, switch to the Auto Synchronization tab and select the time when you want to have the items get synchronized automatically. You are all set now. Of course, you can switch between other tabs and play with other settings if you want to. For example, you can set the Category Filter on the corresponding tab. The Mac version of CompanionLink is also available that supports 2-way syncing between Mac and Google. A trial version is not publically available, though, and you would have to provide your email address to get it. I personally hate this practice, but they probably have some reasoning behind it. It also supports synchronization with Evernote, Dropbox and some other accounts and lets you edit Google calendar events imported into the Outlook calendar. The gSyncit tool has a free and paid version. However, the changes introduced in version 4 have made an unregistered version almost useless: So, currently an unregistered version of gSyncit can be used for evaluation purposes only, alas. If you want to remove the above limitations, you will have to buy a registered version. How to configure Outlook and Google calendar syncing with gSyncit You start by clicking the Settings button on the gSyncit tab on the Outlook ribbon. In the Settings window, choose what items to sync on the left pane and then click the New button. After that you create a new mapping by specifying 3 essential things: Click the Verify Account button to enter your credentials and verify your Google account. And finally, click Select Calendar under Outlook Calendar section to choose the Outlook calendar you want to sync with. For additional options, switch to the Sync Options tab and check the options you want. Of course, there are a handful of additional options on other tabs, but in most cases the settings on the Sync Options tab absolutely suffice. Now you only need to click OK to save a new mapping that will link your Outlook and Google calendars together. Once a new mapping is created, you simply click the appropriate button on the ribbon and your Google calendar will get synced with Outlook straight away. You can also enable automatic syncing when Outlook starts or exists: If you want advanced options, the following ones may come in handy: Synchronize all appointments or within a specified time range only Sync Range tab. Sync Outlook appointments from certain categories only Categories tab. Remove duplicate appointments Sync Options tab. Summing up, if you are an active user of both calendars, gSyncit is definitely worth your attention as a tool to automate Outlook and Google calendar syncing. However, the imported calendar snapshots are not updatable and you need to get a new snapshot every time the calendar gets updated. This does not seem to be the best approach if you are actively using both calendars, though it may work if e. The imported Google calendar will open side-by-side with your Outlook Calendar and will be available under Other Calendars. To get the latest version of your Google Calendar, you should repeat the steps described above. Alternatively, you can subscribe to your Google Calendar and have it updated automatically. Exporting Outlook calendar to Google In Outlook Calendar, select the calendar you want to export to Google to make it the active calendar in the view. Switch to the File tab and click Save Calendar. Type a name for the iCal file in the File Name field. Click the More Options button to specify the date range and detail level. Click the Advanced button for two more options: If you choose the latter, be aware that this might significantly increase the size of the iCalendar file. Log on to your Google Calendar account. Click the little black arrow next to My calendars and choose Settings. Under Calendar, click the Import Calendar link. Click the "Choose File" button and browse for the. In the drop down box next to Calendar, choose the Google Calendar where you want to import your Outlook appointments. Click the Import button to finish the process. To get the recent version of your Outlook calendar, you need to repeat this procedure. If none of them meets you requirements in full, you can check out various paid services, such as OggSync , Outlook Dav , Sync2 , GooOut and many others. Please be sure to use only one syncing method described in this tutorial at a time, or else you may end up having duplicate calendar items in Outlook and Google. How to streamline your email communication in Outlook Though this

section does not relate directly to synching Outlook and Google, it may be useful for those who actively use Outlook in daily work.

### Chapter 8 : Remove Duplicate Contacts + on the App Store

*Check your Apple ID and make sure that you select what you want to update (Mail, Contacts, Calendars, and Tasks). If you sign in to third-party apps with your Apple ID, protect your account with two-factor authentication and use an app-specific password.*

### Chapter 9 : Contact list for Windows 10 Mail - Microsoft Community

*Being productive is all about using the right tools. With seamless integrations, travel and delivery action cards, and our Focused Inbox that automatically sorts what's importan.*
