Stay up to date on all site updates. Below is a copy of the relevant content from the part 4 email. Have You practiced what You learned in the First 3 Lessons? Are the fundamentals becoming more comfortable yet? Practice is the one and only most important thing when it comes to improving Your Game. You need the knowledge of the Fundamentals and the techniques. You must learn how to utilize them or they will not help You much. Playing Pool is good. Practice Your fundamentals when You Play. Dedicated Practice is how You can dramatically improve Your Game. Dedicate some regularly scheduled practice times for Your benefit and find out how much You can improve quickly. Lesson 4, English and Deflection! The lesson for today will introduce You to English. If you recall we did an exercise where You shot the Cue Ball straight down the table and it came back to rest against the tip of Your Cue. When shooting this shot You were using Center English. Today we are going to practice and learn about right and left English. Using the same set up as in the stroke the Cue Ball straight drill, and shooting the Cue Ball straight down the table, into the center diamond. This time apply about a cue tips width of right English. Your Cue Ball will come off the bottom rail to the right. The degree of angle will depend on the amount of spin and ball speed. You can then apply Left English and the Cue Ball will deflect to the left. Check out the Pictures and Explanations Below. I am not a pro with pictures. These pics are to help You understand the lessons. Please take them for what they are, which is Training Aids. The pics are not created for a graphics contest. The picture is to help you visualize English. The black dots represent the Tip of Your Pool Cue. Please realize that these examples are extreme English. You will apply some spin if You strike the Cue Ball off center even a fraction of an inch. The picture shows center right and center left English. You can also apply high or low, right or left English. Practice the shot pictured above with Right and left English. Learn the correct spin and speed to strike the center diamond as pictured, and scratch in the corner pocket. If You do not want to scratch, place an object ball in the pocket. Sometimes practicing with Your Cue Ball only can be very valuable. Practice sending Your cue ball off the rails with and without side spin. This will cut down on table fouls because You will know how to control the Cue Ball off the rail. Shooting these Billiard Drills repeatedly will increase Your skill level massively. Give some serious thought to the Practice Investment. It is the best investment You can make in Yourself. Get Your Cue Ball spin under control over the next 6 days. This will help You with lesson 5.

Chapter 2 : Pool Patterns - Easy Pool Tutor

A selection of pool practice routines designed to improve different aspects of your game.

I believe there are several different ways to look at drills. First off, I think you can look at drills as an end in themselves. Work the drills and learn variations on a standard -- maybe like playing "Chop Sticks" on a piano. A drill can show you how minor riffs can produce divergent outcomes -- selection of speed and spin all dramatically changing what the balls will do on any given shot -- similar but different. Second, some people need a little structure to maintain their interest while practicing. IOW, the drill is an overt tool to help maintain focus. One guy likes the treadmill, the other likes an outdoor run. One guy can practice 9ball or And for these folks, drills are a great little game of solitaire to strive and measure their performance against. Personally, I think the most valuable way to look at drills is like a Zen koan. The drill is just a vehicle to get you inside your game, your mechanics, your stroke, your mind. This is also the toughest way to workout. You are not only working on the aggregate shots and required positional plays of the drill, you are also seeking to achieve a mental state wherein you can become introspective about your choices, mechanics, and stroke. Doing fundamental drills will "groove" your stroke. Without a repeatable, straight stroke, all else is nothing more than a crap shoot. Doing pocketing drills will increase your confidence and ability in making balls. It will also show you which shots are low percentage for you. Doing pocketing drills combined with positional drills will increase your confidence and abilities in pocketing and positional play. Playing the ghost will enable you to take your individual skills and combine them. It will teach you pressure. It will teach you how shots tie in together. It will teach you the best routes to take to make things as simple as possible. Doing drills will enable you to set up the same shot, and see exactly where you had a problem with it. In any case, drills, or playing the ghost, will do you little good if your goal is just to perform the drill a set number of times. The drills are to reinforce your muscles and your subconscious on how exactly to perform it. So that under pressure, you will perform as you trained. During drills, you should be paying very close attention to details. ALL the details, so you can actually learn something and improve. To those that think drills are a waste of time - good luck with that.

Chapter 3 : Billiards and Pool Drill FAQs

But in other popular games like Continuous Straight Pool, One Pocket and Bank Pool, just to name a few, you have to decide which ball will be your finishing ball. In Diagram A, the finish ball is, of course, the 8-ball.

Patterns Written by Mark Finkelstein One of the things that amazes me is how hard some people make playing pool. Pool is a very difficult game, yet moving from ball to ball can sometimes be done the easy way or the hard way. So many people seem to always wind up going about things the hard way. Follow easypooltutor Learning how to play patterns is one of the key factors is running balls. Unfortunately, today's nine ball players never really had to learn much about patterns. The numbers on the ball dictate which ones you have to play next. Here are some old timer exercises that I have learned in the past to help you get a grip on pattern play. I have tried to give you the source of the drill as best that I can remember. Spending some time with these drills, trying to do what is simplest will open your mind to some new ways of running balls, and the advantage of looking at all the pockets. Have fun, these drills are challenging. The object here is to make all the balls without touching a rail or another ball. This drill is great for close in pattern play. The object here is to make all the balls and keep the cue ball in the center of the little circle. Figure 2 Here is a great drill from Bert Kinister. His tapes have some great stuff and I highly recommend them. This drill really makes you put on your thinking cap. The object is to randomly throw 5 balls on the table around the spot, and try to find a pattern that you can make the balls with only stop shots. Here is a sample lay out and my solution. Figure 3 My solution is to play the 2 in the side and come back just a little. Then you have stop shots on the 4 corner, 8 corner, 1 side and 5 side. There may be other solutions and the idea is to find one that you can do. Of course the fun part here is after you torture your brain to find a pattern, you then try to do it. Now that is fun. Now you have something to practice other than aimlessly rolling balls around thinking you are practicing. A good pattern is the easiest order of pocketing balls that accomplishes your objective. Planning a sequence in 8 ball means that you have to start from the 8 and work backwards until you can as Abe Rosen at the old Amsterdam Billiards uptown used to say, "solve the puzzle of this rack! To help guide you in your choice of shot, remember that a rolling cue ball is the easiest to control if you have to move the cue ball, and a stop shot gives you the exact position of the cue ball after the shot. Good luck with learning pattern play and see you on the road.
