The Great Depression has made jobs scarce and money hard to come by. America still loves baseball and two boys are about to discover that with some creativity, hard work, and a little help from the Babe himself, they can do their part to help out their own teams! Books for young readers Cam Jansen, the girl with the photographic memory, has been solving mysteries and helping children learn to love reading for almost twenty-five years. New for Mo Jackson plays football--winner of the Dr. Mo Jackson plays soccer. Text entered here will wrap around the left or right-aligned image. Author , Ricks, Sam Illustrator May The youngest kid on his football team, little Mo watches most of their games from the bench. While beginning readers may not be playing organized football, they can still dream about it. Laid out in simple words, large type, and wide-spaced lines, the text is illustrated with colorful, jaunty line-and-wash illustrations that portray the diverse characters with energy and style. The simply told story features an appealing underdog with enough skill to catch the ball and enough humility to give his coach some credit. Fortunately for young sports fans, this one is a winner. He participates in a neighborhood football team in which most of the kids are older, but Mo practices every day and keeps coach Steve company on the bench cheering for his team. One day, things change for Mo; coach Steve puts him in the game. Then one special play saves the game, and Mo wins it for his team. This beginning reader is well designed with bold colors and cartoon illustrations to provide new readers with context clues that support the story. Simple sentences and in-depth plot support key details providing material for strong comprehension to support fluency. Wheels, Levers, and Pulleys. Author , Raff, Anna Illustrator May What do a slide, a flagpole, and a tricycle have in common? They illustrate principles of physics relating to simple machines: The emphasis in each description is that simple machines make work easier. An inclined plane can be a simple ramp, a winding road leading to the mountain top, or a screw. The wheel and axle of a tricycle is shown next to the more complex Ferris wheel. Children will be drawn to the depictions of the machines in familiar situations such as turning on a water faucet or playing on a seesaw. The charming illustrations, featuring children, adults, and even a cat, enhance the impact of the message by depicting a small community going about their lives and using simple machines to make work easier. May 1, Prices! Why They Go Up and Down. Author , Miller, Edward Illustrator May Adler and Miller, known for their math-related picture books for kids, now present the laws of supply and demand. His initial outlay for equipment represents his fixed costs. His supplies and ingredients are his variable costs. Each day, he adjusts his price according to the supply of lemonade a rival stand increases supply and the demand for it a hot day increases demand. Adler lays out the four laws of supply and demand in a logical, methodical way, while Miller brightens the pages with vibrant, stylized digital illustrations. One or two helpful diagrams appear on almost every double-page spread, showing how changes in the narrative can be expressed in terms of either revenue, variable costs, and variable profits, or supply, demand, and prices. Kids cruising through the story may not absorb all the concepts, but those who are motivated to think through the basic economic principles will find the book useful and interesting. Young readers will easily see themselves in Danny and his compatriots. Box , Hewlett, NY Please include a stamped, self-addressed business-sized envelope 45c with all fan mail. How do you choose the subject for a biography? I like to write about people I think are interesting. When I decide on a subject, I discuss it with my editor and she decides if she thinks it will be interesting to children as well. If I find the person interesting, I love the research part and, by extension, the writing as well. I go to different sources depending on the person. One of my favorite sources are old encyclopedias. If I am writing about a person who lived years ago I get an encyclopedia from years ago. I have a encyclopedi and a encyclopedia. I try to go to newspapers of the time. Do you use the Internet for any of your research? I try not to. Have you ever found out something about one of your subjects that surprised you? I find as I do more research, there are some subjects I like more and more and some I like less. Should a biography always begin with when the subject was born? My earlier biographies did. Well, what I try to do is teach as much about the

subject through incidents rather than through a listing of facts. If I must list facts, the next paragraph will be an incident that is interesting, but is an example of one of the facts I just listed. Why did you choose to become an author? I love to write. How closely do you work with the illustrators of your biographies? I work on the manuscripts and send them to my editors. They send the manuscripts to the illustrators. How did you get started with the Cam Jansen series? I just wrote the first one and sent it to a publisher and they said they wanted to do a whole series. For the first book, I based it on a boy I knew in first and second grade at school who we thought had a photographic memory. I based the first one or two stories on him and the next stories on those first books. The Andy Russell books are based on things that go on in my family. A snake got loose, too. Here it was a great calamity, but also the beginning of a new series. Before, writing a biography, do you write a short biographical sketch? Do you plan to write some biographies of people who lived closer to present-day times? I do have one scheduled of a 20th-century president. I did one on Rosa Parks. I also did one on Gertrude Ederle, the first woman to swim the English Channel. She lived in New Jersey and only died a few years ago. How long does it take you to write a biography? Have some taken longer than others? Well, I just finished a biography that I worked on for almost two years. I had to do a lot of research on South American history. Where did you grow up? I grew up on Long Island, New York, in a big house, filled with brothers, sisters, and books. I had three brothers and two sisters. Will you ever write your own autobiography? When deciding on a biography to write, do you try to pick people of diverse cultures? How do you keep your research materials organized when writing a biography? I work on one chapter at a time, while I do the research. So, I research a chapter and write it. Then I research the next chapter and write it. I go one chapter at a time, writing as I research. Of all of the people whose biography you have written, which one would you like to meet? What was your favorite subject in school? Math and history were my favorite subjects. I taught math for nine years and history for about half a year. The school needed me as a math teacher more than as a history teacher. Who were your favorite authors that you read when you were young? I loved the stories by Robert McCloskey. I liked some of the early Dr. I also liked to read biographies when I was young. What do you think is the best thing about writing? I love that no one would write a story exactly the way I would write it, even the same story.

Chapter 2 : Bones and the Math Test Mystery by David A. Adler | Scholastic

Jeffrey Bones is a detective and also a student. His teacher, Mr. Gale, gave a math test and after Jeffrey handed in the test, it got lost. Mr. Gale was going to make him retake the test but Jeffrey wanted to solve the mystery.

Go to the Memory Quiz Page. Box , Hewlett, NY Please include a stamped, self-addressed business-sized envelope 45c with all fan mail. Cam is based on a friend of mine from elementary school. Eric is based on me. When I wrote the first of the Cam Jansen mysteries I thought children would identify with timid Eric. Questions and Answers with David A. I had been a math teacher in the New York City school system and was just beginning a child care leave. My first son had been born and I planned to stay home and take care of him while my wife returned to her work as a school psychologist. I had already written a few books, but I wanted to work on a series. I wanted to create a character young readers would want to read about again and again. I remembered a classmate in first and second grade with a great memory. It was rumored he had a photographic memory. The character Cam Jansen began with him. I also remembered the trouble I had when I first learned to read, the difficulty I had with the books meant to follow the Dick and Jane series. It was too big a leap for me. Even in the late s, when my first son was born, there were still very few books between the easy-to-reads and the eight-to-twelves. Somehow, children were expected to make that leap. For some, it was no problem. For me and many others, it was. The Cam Jansen books not the Young Cam Jansens are transitional readers, books for children "in transit," from easy-to-reads to middle-grade novels. Why did you make the Cams mysteries? Comprehension is a real problem with beginning readers. He was too busy sounding out the words to pay any attention to what he was reading. Mysteries are perfect for beginning readers. In the Cams, the clues Cam remembers at the end of the books, the clues that solve the mysteries, are there for the reader, too. They try to find the clues and solve the mystery before Cam does. What makes Cams transitional readers? The Cams are not simply chapter books with easy reading levels. Children who are just beginning to read on their own, read slowly. They read every word. The Cams move quickly. Something is always happening. Characters are introduced through dialogue and plot. Scenes are set in just a few words. Why did you decide to make Cam a girl? I like to write against stereotypes. Cam, as a girl, is curious and assertive, just as many girls really are. Did your years as a math teacher influence your writing in any way? I approach my Cam Jansen mysteries as math problems. First I set up the problem -- to create a mystery that will be solved with visual clues. Then I go about solving it. An interview with Bruce Black: The only way to get into the water is to jump in. Just jump in and write. How can there be dry spells in swimming? Being dry can only mean you stepped out of the water. If I get stuck working on one manuscript, I start or continue work on another. I find it helpful to work on more than one project at a time. The hardest part, I find, is discovering the voice for my story and that comes at the very beginning. Writers always swim alone. I try not to put too much pressure on myself, not to demand a great first draft. I love the rewriting, just playing with my words. I feel somewhat sad to finish the final rewrite and have to send off a cherished manuscript. Please include a stamped, self-addressed business-sized envelope 46c with all fan mail. Calvin says his father is a traveling spy when he has actually abandoned the family, and the jelly bean experiment is really about making friends. Jodi Reamer, Writers House. Check out the Cam Brain Teasers page. Reviews of David A. Both of my boys came home and wanted to write stories. Blink your eyes and say "Click! See how much you remember. Maybe you have a photographic memory, too! Play the memory game just below. Play the memory quizzes elsewhere on this site. Play the Photographic Memory Game found on the mystery page on the www. To play this game you will need pencils and paper, and a watch or timer. Perhaps a poster will be upside down or among the books on the bookshelf will be a box of cereal, or there is a large plastic bug somewhere. You can even use an image projected on the wall with some unusual details, perhaps an illustration from a Cam Jansen mystery. Of course, there can be no talking during this time. When time is up, have them leave the space and write down all the strange details they remember. She drinks her milk too fast? Her head is hot and her hands are cold? Her watch is going "tock"? She wants a taste of ice cream? She wants to lay an egg? She sees Eric with his hands in front of his face? She sees geese fly by? She steps on a wad of chewing gum? Cam Jansen has a

photographic memory. Maybe you have one, too.

Chapter 3 : Accelerated Reader Bookfinder US - Book Detail

Bones and the Math Test Mystery by David A. Adler and Barbara Johansen Newman To help put the right book in each reader's hands, consider the following comprehensive text complexity analyses within your instructional plans.
