Chapter 2 : Adventurous women : eight true stories about women who made a difference - ECU Libraries C

Are you sure you want to remove Adventurous women from your list?

My Great Uncle Walter Granger was a famous fossil collector and vertebrate paleontologist. He was born in and died in I was born in , and my parents named me Penelope Granger Morgan. How he and his assistants discovered the first whole dinosaur eggs and nest. There was my mother who compiled a lifetime of adventures in everything from travel to journalism to art to music to fire fighting. Yes, fire fighting; as I write this I am glancing at a photograph of my mother taken shortly after she helped put out a big fire. She is wearily leaning against a pole and holding her helmet in one hand and a cup of something to drink in the other. My mother was fifty years old when she joined the Chautauqua Volunteer Fire Company, actually she was a few months short of her fiftieth birthday. I remember that because she had to pass the tests before she reached fifty, the age limit for new members. No wonder I grew up loving adventures and believing that women could have adventures, even though women were rarely, if ever, portrayed as adventurers in books or in the movies or on television. For me, adventures are about being bold, about defying set ways of thinking and behaving, about taking risks, going beyond the boundaries, the limitations, about overcoming obstacles, about daring to be different. Adventures can happen anywhere—in a laboratory or a library, at home or far away. Adventures do not discriminate: I selected women because most adventure stories are about men, especially historical adventure stories. My intent is not to replace men but to add women. *Adventurous Women* features eight women from diverse racial and ethnic backgrounds: Louise Arner Boyd, an Arctic explorer; Mary Gibson Henry, a botanist and plant hunter; Juana Briones, an entrepreneur and family head; Alice Hamilton, a scientist and industrial toxicologist; Mary McLeod Bethune, an educator and humanitarian; Katharine Wormeley, a Civil War superintendent on hospital transport ships; Biddy Mason, a former slave, midwife, landowner, and church founder; and Peggy Hull, a journalist and war correspondent. They were all born in the s and died in the s, except Juana Briones who died in and Biddy Mason who died in Hamilton and Hull grew up in the Midwest. Mason and Bethune grew up in the South. Four of the women—Henry, Briones, Bethune, and Hull—had husbands Hull had several and Briones and Bethune eventually lived apart from their husbands. Briones had eleven children, Henry had five, Mason had three, and Bethune had one. Juana Briones and Biddy Mason had no formal education. Mary McLeod Bethune graduated from college. Alice Hamilton studied at home and at a finishing school. After that, she graduated from medical school and continued her studies at universities in Europe and in the United States. All of the women dealt with limitations and stereotypes because they were women. They all took risks and overcame obstacles. Although a few women had access to family money, most of them generated the resources they needed through gainful employment, fundraising, and business enterprises. For each one of the women I chose to write about, there were many more I set aside for another writing day. How did I choose? I was looking for variety and unknown women as well as known. I was looking for obvious adventures exploring the Arctic and not so obvious starting a school and for adventures that contributed something to society, that made a difference. I searched for information in historical societies, libraries, archives, cemeteries, public monuments and historic sites, and on the Internet. I also spent innumerable hours of reading. I read rolls of microfilm that contained photographic reproductions of old newspaper and magazine articles. I read scientific reports, books, letters, and speeches. I studied numerous photographs and maps. I also consulted with other historians, in particular Jeanne Farr McDonnell, an expert on Juana Briones, who provided invaluable information. I made this decision because the essay form allowed me the freedom and flexibility to write about women who had very different adventures and who left behind varying amount of primary source material. The chapters vary in length and structure: Some chapters feature extensive first person and eyewitness accounts, and chapter six has two parts—an essay and letter excerpts. Throughout, however, I maintain a conversational voice. In addition, readers will discover quotations that are in italics and centered in the text. The essays appear in the order in which I wrote them, a reflection of

many things, including the availability of sources and the twists and turns of my curiosity. Readers, of course, can read them in any order. The back matter includes brief chronologies, a list of places to visit, namesakes, notes, and a bibliography and webliography. Every book I research and write is an education. Every book is also an inspiration, especially this book, for it is about real women who did real things and in the process created real stories about the many ways there are to live a passionate and productive and adventurous life.

Chapter 3 : Adventurous Women | Penny Colman Official Site

Marie Peary Stafford and Louise Arner Boyd were both women of means who were drawn to the Arctic somewhat by chance. Stafford, the daughter of explorer Robert E. Peary, was born and spent the first months of her life in Greenland.

Not only did she become the first woman in the world to fly over the North Pole in 1921, she was also the first female councilor of the American Geographic Society. Her intrepid exploits took her everywhere from Arctic Canada to Greenland and, of course, the North Pole, which she not only reached by plane but previously by ship and dog sled too. Only those who have seen the magnificent sunsets over the ice, who have been buffeted by storms can appreciate the spell which always draws us back there. Tragically, one of his travel companions died of heat exhaustion on the way, and he also had to battle snakes, crocodiles and a charging hippo. Hacking through long grass up to our necks and being constantly at risk of encountering pythons, lizards and crocodiles with every step we took certainly felt like a challenge. We managed to walk only about 50 meters every hour. He undertook three expeditions to the Antarctic, all while suffering from a hole in the heart which often left him breathless, fatigued and feeling weak. In 1916, he set off on his third trip to the Antarctic on the ship *Endurance*, but months later, in early 1917, the ship became trapped in the ice and sank after 10 months. Astonishingly, every single member of the *Endurance* survived despite the most unlikely circumstances. After retiring from the British Army in 1907, he got his first taste for adventure after leading charity expeditions to the jungles of Belize, taking gap year travelers into the rainforest. He did carry a camera though, to film his experience for the Discovery Channel. I actually did get held up at gunpoint several times by drugs traffickers and at arrow-point by angry local tribes, and once I even got arrested for suspected murder. But I managed to stay alive and completed the journey in August after days of walking. A lot of Robbie Williams was sung that night. Freezing temperatures, thick fog and poor light meant that at times she was confined to her cabin for days, and that her life was in very real danger at the hands of the elements. The boat was so badly damaged that she needed to be rescued afterwards. Outen told the *Telegraph*: From braving the blistering heat of the Sahara to become the oldest Briton to run the infamous endurance race *Marathon des Sables*, to dealing with freezing temperatures to complete the first unsupported crossing of the Antarctic continent, this famous English adventurer has undertaken countless perilous adventures. During a previous Arctic adventure, he cut off his own fingertips and the top of his thumb after experiencing painful frostbite. Battling severe weather and exhaustion, the team fought extreme weight-loss and malnutrition to achieve their goal. He now works with adventure operator Gane and Marshall to lead expeditions to demanding places, such as Everest Base Camp, the deserts of Oman and the Arctic. As the first woman to conquer Mount Everest, Tabei sealed her name in the history books forever, but it was no easy feat. In 1975, during her Everest climb, Tabei was woken by an avalanche and, along with her team, would have been killed were it not for the fast-acting sherpas, who dragged them out by their ankles. Despite being diagnosed with cancer, Tabei never stopped climbing, with her last ascent Mount Fuji, accompanied by students affected by the Japanese earthquake and tsunami. She was also a campaigner for sustainable mountaineering, saying of Mount Everest: It needs a rest now.
