

Chapter 1 : Geography of North Korea - Wikipedia

Abstract. This proposed resource management plan and final environmental impact statement addresses management of all resources on approximately , acres of public land administered by the Bureau of Land Management, Diamond Mountain Resource Area, Vernal District, in Daggett, Duchesne, and portions of Uintah Counties, in northeastern Utah.

Mount Diablo Coalfield[edit] Historic marker for Mt. The largest and oldest town, Nortonville , had a peak population of about 1, Somersville , Stewartville , West Hartley and Judsonville were located in valleys to the east. The sites of Stewartville and West Hartley are located on private property outside the eastern boundary of the Preserve. The coal produced was of a low grade sub-bituminous or lignite , but for a time in the 19th century, was the only readily accessible and economic source in California. Therefore, it was a very valuable resource and powering the railroads, ships and heavy industry of California. Coal mining activity ended as better-quality imported coal became affordable and as petroleum emerged as an energy source. After the coal mines closed, the towns were abandoned and the area was used mainly for cattle grazing. The coal mines are closed due to hazards posed by the age of the mines, the gases they produce carbon dioxide and methane , and their rock quality the shale and coal in the mines is unstable. However, a number of mine openings have been turned into public-access openings which allow visitors to look into the mines and, for some, to walk a short distance underground. The deepest public-access opening is known as Prospect Tunnel. Rose Hill Cemetery[edit] Rose Hill Cemetery Rose Hill Cemetery, officially designated as a Protestant cemetery, the final resting place for over residents of the coalfield, is located on a hillside between the Somersville and Nortonville townsites. Many of the gravestones were stolen or destroyed by vandals. The original records for the cemetery were destroyed in the San Francisco earthquake and fire. Many of the individual plots were never marked. More had only a wooden marker - nearly all of which were destroyed over the years by either wildfires that swept through the area or by insects, weather, or other natural cause. Vandals are said to have carried off some of the more permanent stone markers. William Gething, age 36, who was killed with 9 other men in an explosion; 7 other men who died at the same time are buried nearby. Davis, died in He sold the product to the Hazel-Atlas Glass Company which operated a plant in Oakland manufacturing glass containers. Hazel-Atlas eventually purchased the mine and operated it until about Another sandstone mine in the Nortonville area produced sand used by the Columbia Steel mill in Pittsburg, California for steel casting. The two companies recovered more than 1. The first section is a series of self-guided exhibits, while the larger second section which has a separate entrance from the outside , houses a reconstruction of the Hazel-Atlas works as it would have appeared around It did not reopen for five years. It is home to a variety of wildlife including deer, mountain lions, coyotes, foxes, bobcats, golden eagles, and a variety of hawks. The endangered San Joaquin kit fox *Vulpes macrotis mutica* and threatened California red-legged frog *Rana draytonii* , California tiger salamander *Ambystoma californiense* and Alameda whipsnake *Masticophis lateralis* are present as well. The park is open year-round for hiking, mountain biking, and horseback riding from 8 am to dusk. A backpack camp and a group camp can be reserved for overnight stays. There have been many reports of a ghost in the park. The property had been deeded to the holding company by Gordon Grevelle, president of Suncrest Homes, who had originally planned to build a gated residential community there when he had bought the tract in After going through an extensive permitting process and a decline in the California housing market, Grevelle decided that the project he had envisioned would be unlikely to meet his financial goals. Since the tract was already surrounded by park land, he chose to make the land available to EBRPD, which announced its intention to add the land to the Black Diamond Mines Regional Preserve. Only 80 gravestones remained in Men buried there were mostly immigrant miners from Wales, killed in mining accidents, while the women were wives who died during childbirth. The majority of graves in the cemetery are for children who died in epidemics of scarlet fever , typhoid fever , smallpox , and diphtheria during the late s.

Chapter 2 : Rock Climbing in The Diamond, RMNP - Rock

The Diamond Mountain Resource Management Plan is approved. The plan was prepared under the regulations for implementing the Federal Land Policy and Management Act (FLPMA) of (43 CFR).

Areas containing general habitat preferred by raptors are closed during this time. Once raptors have selected nesting spots, the initial closures are lifted or adjusted. The specific areas which raptors choose for nesting sites are closed. I am somewhat wary of writing anything that could increase traffic, though hopefully all this beta will decrease rescues. The peak sees thousands of ascents every year and the East Face is starting to feel like the Boulder Rock Club. You can do yourself and everyone else a favor by climbing on weekdays. The Diamond free-climbing season generally runs from mid-July to mid-September. If taking the rappels from Chasm View, they begin from bolts on a large, semi-detached rectangular block. Most people who want the East Face hike to Chasm [Lake] and scramble around it on the north. If you are looking for the North Chimney read: The North Chimney is somewhat hidden, and lies further north, below the center of the Diamond. It has a snow tongue reaching up into it. For a great detailed description of the best way up the North Chimney , click this link. The North Chimney is a potentially very dangerous 4th and 5th class approach, with dangerous loose rock. Descent The rap route on the Diamond off the left side on D7 is becoming very crowded, and I have seen parties ascending D7 become the victims of whiplash. Rude people are just as numerous on the Diamond as anywhere else. The raps start just below Table Ledge, directly above D7. Nearly all of the anchors all bolted, 5 in total are slightly to one side or another--rappel slowly. The Crack of Delight rappels total of 4 are also all from bolts and thankfully do not actually occur in the North Chimney; they start at the edge of Broadway below the Casual Route near a Lower East Face route called Crack of Delight - which is South of the North Chimney. If you are at slings and not bolts, you are off-route and your rope will get stuck! From the summit or just above the step around , contour to the north should not exceed 3rd class or present any exposure to pick up some cairns which lead to the North Face rappel, off the huge eyebolts which used to anchor the cables one double or two single rope raps. Head out to the Boulderfield and the trail, or hike down the ridge to Mount Lady Washington above the Chasm View Wall until you can descend down talus slopes to the south. One can also take the Keyhole hiking route down from the summit--follow the sign and paint splotches on the rocks.

Chapter 3 : Washington Lands - Green Diamond Resource Company

More information on this program is available here. This area is posted to limit entry to Recreation Access Permit holders. The company also provides a permission area to the Squaxin Island Tribe for traditional activities. In this area, non-motorized entry is allowed for non-consumptive use such as hiking, mountain biking and similar activities. Signs are posted in this area, as well. Outside the Recreation Access Permit area, Green Diamond allows free public access to most of its working lands in Washington. Download printable maps here. Non-motorized access is allowed year round, except during periods of extreme fire hazard or active operations when lands are posted to prevent entry. No ORVs of any kind are allowed. To protect our forests from environmental damage, vehicles must remain on roads. Most Green Diamond gates are painted orange. Signs posted on the gates provide information on access. Similar to other industrial timberland owners in the region, we use a "Red Dot, Green Dot" system of signage see image on right. A red dot indicates the area is closed to motorized vehicles. Non-motorized use is welcome. A green dot indicates that licensed vehicles are allowed behind the gate. Occasionally, you may run across an open gate with an orange sign indicating forest management operations are occurring in the area see image on left. If you witness illegal or unsafe activity, dial If you see evidence of illegal activity, please contact our office at Green Diamond also employs a Rewards hotline at The Green Diamond Resource Company property protection rewards program is not a product promotion and it is not an invitation, inducement, or permit granting access to Green Diamond property. The decision to provide Green Diamond with information on potential criminal activity occurring on Green Diamond property is voluntary and does not create a contract between Green Diamond and the person providing information. Green Diamond reserves full discretion to determine whether to reward a person who provides information on potential criminal activity and the amount of any such reward. Green Diamond cannot guarantee the anonymity of a person who discloses their identity when providing information on potential criminal activity because such information, including witness identity, may be referred to appropriate law enforcement officials for investigation and prosecution. The following persons are not eligible for property protection rewards from Green Diamond:
