Chapter 2 : How to Convert a WordPerfect Document to a Microsoft Word Document

Book Learn WordPerfect for Windows fast! audio link Philosophy Of Arithmetic Psychological And Logical Investigations The Chronicles of Narnia, 60th Anniversary Edition Malcolm X Quotes On Education He Writes about Us The History of Rome, Books 01 to 08 If WordPerfect for DOS won't run on your new Windows 7, Windows 8, or Windows 10 computer.

Choose attractive fonts to generate interest in your subject. Make the titles and headings larger than the body text so that they really stand out. It only takes a few minutes, and the results are well worth your effort. There are fonts included with WordPerfect Office X3. Of these, 24 are the character set fonts, which contain the symbols and foreign language alphabets. During a typical installation, a default set of fonts is installed. The rest can be installed separately, using either the Install Wizard or the Windows Fonts folder. Caution As you format your document, remember to always, always, always position the insertion point first. As a general rule, your changes take effect at the insertion point, which may or may not be where you want them. You can click the Undo button to reverse the last action or continue clicking to reverse the last several actions. Selecting Fonts The quickest way to choose a different font is to click the Font Face drop-down arrow on the property bar. A drop-down list of fonts appears, and a large preview window pops up at the top of the document see Figure 3. As you point to a font in the list, the sample text in the preview window morphs into that font. Thanks to Real Time Preview, the text in the document does the same thing. When you find the font that you want, click it. Otherwise, the new font or size takes effect at the insertion point and stays in effect for the rest of the document unless, of course, you change the font or size again later. Selecting Font Sizes Choosing a different font size works essentially the same way as choosing a different font. Click the Font Size drop-down arrow on the property bar to open a drop-down list of sizes. A point is a unit of measurement used to describe the size of a font. A preview window with sample text opens next to the list. As you move the mouse down through the list, the sample text and the document text expand and contract to show the new size. Likewise, if you select a font that you want to use for most, if not all, your documents, set that as the default for all new documents. Choose Format, Font to open the Font Properties dialog box. Make your selections, and then choose Settings. What was once a logistical nightmare is now completely painless, thanks to font-embedding technology. You can save fonts with a document so they go where the document goes. WordPerfect compresses the fonts and saves them with the file. Tip From Ever wish you had a "font catalog" that you could flip through? WordPerfect includes a nifty macro that prints out a sample of the fonts on your system. Choose Tools, Macro, Play, and then double-click the Allfonts icon. It will also take a while to print and may overload your printer, depending on how much printer memory you have. If you are unable to print the entire font document, try breaking it up into several pieces. To find a list of all the macros that ship with WordPerfect, along with the steps to create your own macros, see "Running the Shipping Macros," p. Even with the Font Face and Font Size drop-down lists, reselecting the same fonts and sizes over and over is tedious. QuickFonts to the rescue! The last 10 fonts with sizes and effects you selected are kept in the QuickFonts list for fast access. Click the QuickFonts button on the property bar see Figure 3. Sorryâ€”no Real Time Preview here.
