Nursing Care Plans For Hypertension: This article addresses all the issues you might want to include for hypertension care plans. Problem Oriented Nursing Care Plans: At the time these nursing care plans were prepared, Multiple Sclerosis Center was the focus for these plans. A Treatment Plan That Works: This complete guide is online, and focuses on sinusitis patients. This planning guide has a focus on cancer in outpatient settings. Case Studies and Samples Careplans This site is focused on nursing students, with a member-site library filled with graded patient care plans. Childress offers a variety of templates for intake, insurance and more at his developmental psychotherapy Web site. Only two plans are listed, but they are comprehensive. Free Nursing Care Plan Examples: You can find dozens of plans listed here in a variety of conditions and diseases. Memoir of a Schizo Nursing Care Plans: This nursing care plan sample might help with your own environmental home assessment. AORN offers this sample, which is a comprehensive look at immediate preoperative issues. This site carries numerous case studies for physicians, pharmacists, nurse practitioners, case managers and employers. Loyola University Medical Education Network offers several case studies, including one for small cancer cells. This specific plan focuses on a female with depression. Treatment Plans that Worked: This site now carries over samples of treatment plans in their database. Software wizards make it easy to to load data from the user-defined libraries by guiding the user step-by-step through the process. American Health Care Software: The Clinical Care Suite allows you to create and maintain a central database containing all the clinical information for each care recipient. This nursing software provides documentation, survey results, supports reimbursement claims and provides a path to Electronic Health Records EHR. This company offers home health care plan software that integrates intake, scheduling, clinical and billing with user-friendly point of care. Clinical Systems Care Management: Interactive Health Network Care Plans: Since the assessment and care plan modules are linked, an initial care plan can be produced upon admission, within 24 hours after admission or later. Go to this link to learn that MDS 2. Nursing Care Plan Editor: Use this tool to create nursing care plans, including nursing

diagnoses and nursing interventions.

Chapter 2 : Lippincott Advisor

An invaluable, interactive learning tool that allows students to build customized care plans using the Nursing Information Retrieval System (NIRS C) developed by the National Council of State Boards of Nursing.

Low scores suggest opportunities for improvement. But as you grow, you may need to conduct a more thorough analysis. Does your company measure up well in addressing these three priorities as compared to your competitors? Do you collect information about your customers in a formal, systematic manner? If you answered no to any of these questions, that shows you may want to gather customer information more aggressively. Start by reviewing customer complaints, questions, and comments. Surveys and focus groups are popular methods for gathering information on customer needs. Surveys are written questions given to individuals; focus groups are oral questions posed to groups. Uncover potential areas of customer dissatisfaction by reviewing your key operational data. Check the status of backlogs, stockouts, or customer complaints. Review your returns to gauge whether customers are unhappy with your product. Also check your internal reject or yield rates. If your rejects are high or your yields low, some bad product may leak out to the customer. Use your employees as a valuable source of information on customer requirements. Vendors and service providers. Like many entrepreneurs, you may outsource parts of your business operation to specialized services. Specifically, you might pay outsiders to handle employee benefits, purchasing, and Web site design and maintenance. Many small businesses also hire firms to provide customer service call-center services. Enlist these vendors and suppliers to help you stick to your customer service plan. Have your Web site administrator categorize the types of feedback that customers provide online and provide rapid responses. Or ask your shipping unit how frequently it must re-do an order because customers reject it the first time. Do you find any overlap? The Best Kind of Data More is not necessarily better when it comes to customer data, but getting the right information is critical. Seek these elements in the data you measure: While general input may give you some hints, more pointed, concrete feedback will direct you to take appropriate action. Old data can turn obsolete by next quarter. Concentrate on information that affects your bottom line, and separate hard evidence "my order came a week late" from soft data "I was less than impressed". Create Your Customer Vision and Service Policies When a Washington Post reporter returned from the PhoCusWright conference on the Internet travel business, he wrote about his experience watching a panel of 12 executives who run big online travel sites. An effective customer service plan must be built on a customer-centered vision for your company. Your vision is what you want your company to become, what you want it "to grow up to be. It serves as a source of inspiration to rally you and your employees around a single unifying purpose: It guides decision-making and aligns the company so that all functions work toward a single goal. When you craft a vision that spells out what the company seeks to become, you guide all your employees to make better decisions. After all, an employee who knows where the business is headed will probably make more effective decisions that reinforce that goal. How do you create a vision? Vision statements need not be elaborate. Keep your vision concise. The shorter, the better. That helps you reduce the odds of misunderstanding. In their startup excitement, many entrepreneurs mistakenly write wordy paragraphs that run so long, no one really knows what the vision really means. When creating a vision, you must decide how you want your company to evolve over time. Use this exercise to "see" the future: To what can you attribute that success? List at least five specific reasons your company has grown so fast. What steps have you taken over the last 3 years to upgrade your customer service and ensure that you stick to your customer service plan? Examples include investing in new technologies, conducting surveys, beefing up your service department. Use the above responses to ponder your customer-centered vision. Summarize the key elements of your vision. List all the verbs from your answer above. Do these words fully capture the action you want? Consider choosing more stimulating verbs to enliven your vision, such as changing "satisfy" the customer to "delight" the customer or "trying to provide value" to "promising exceptional value. Some well-intentioned entrepreneurs fall into the trap of adopting policies that clash with customer needs and expectations. Do they facilitate customer satisfaction or do they only erect barriers and cause customer frustration? A quick scan of the feedback will direct you to some of the

most troublesome policies. Reassess whether such rules are necessary. What would happen if you eliminated such policies? Meanwhile, keep your "friendly" necessary policies and strengthen them, if possible. Use customer-friendly policies as a competitive edge to retain your current customers and attract new ones. These skills can be segregated into two areas: Communication Skills How you communicate to your customers is just as important as what you say. Build rapport with customers. Put them at ease and make them feel comfortable. When your customer or prospect enters your store, phones your office, or logs onto your Web site, reinforce your eagerness to deliver extraordinary service. This sets the tone for the rest of the transaction. Every time a customer interacts with your company, the message should be consistent: If a customer calls and gets lost responding to dozens of touch-tone commands think of the I. Make a lasting, positive first impression. When you value customers, your sincerity makes them more receptive and enthusiastic about your business. It all begins with the proper mind-set: A customer-focused organization is not in business to deliver a product or service, but to enable people to enjoy the benefits of its product or service. A temporary employment agency is in business not to fill job vacancies with temporary personnel, but to help their customers enjoy the benefits that their service provides â€" immediate placement of highly-skilled individuals. Seek ways to help customers. Find out what your customers want more or less of â€" and respond accordingly. Get a head start by reviewing customer complaints and other feedback. Then take steps to maximize each customer encounter. Strive to understand their needs each time you deal with them. By exceeding their expectations at any given moment, you make an instant positive impact. Here are some questions you can ask customers to show your eagerness to help: What would completely satisfy you? How can I make things easier for you? Can you think of any other ways I can help you? According to a UCLA study on communication, 7 percent of our communication is verbal, 38 percent is tone of voice, and 55 percent is nonverbal. That means your words alone will not make everything better; you need to align your gestures, facial expression, and voice tone to send a complete message of support and concern for the customer. Rapt listening will enhance your understanding of what your customers need and make them feel valued. Establish a long-term relationship. Never miss an opportunity to thank customers. Then do something to make them want to come back or refer you to a friend or colleague, such as offering a referral bonus if they bring in new business. To ensure you communicate effectively with customers, list three specific steps you and your employees can take to improve in each of these areas: Build rapport with customers:
