Especially, when they allow to do favorite thing with pleasure. For all needlewomen the Free Quilt Block machine embroidery design is offered as a gift. With this embroidery pattern you can decorate not only home things. Production of quilted things is called quilting. This art originated from America and based on patchwork technology – scrappy sewing. Quilt differs from patchwork, as it needs three layers of material which are stitched by special techniques. Designers have fallen in love with quilt. They began to create not only household textiles, but also clothes, accessories with its help. The Free Quilt Block machine embroidery design has dimensional options, so it can be widely used. For example, bright contrasting pattern of the embroidery will excellently look on a dark background of a shirt. If you use threads with an outflow, then you will achieve an additional effect of stitches game. Modulations of the embroidery will draw more attention to the adorned item. While creating a summer fabric bag, you may apply all sizes of the offered design. The largest drawing is for outer face of the product. The average size will be suitable for a patchpocket decoration. The edges of the bag will need the embroidery border of the smallest size. As an option, a border can be in two or more contrast colors. One more fresh modern idea – to pick up threads with effect to an ombra. It is a technology of gradual color transition: You may also like.

Quilt is a multi-staged creation of products: For creation of a quilted product three different types of fabric are necessary. The heating layer acts as the center. Usually it is made of batting, syntepon, light nonwoven fabric. The lower layer is a lining. As a rule, natural materials are used for it: The top layer of a quilt is decorative. Various appliques and embroideries are performed on it. After having prepared all three layers, needlewomen manually or on the machine stitch them. On the external surface of the product an original adornment appears. The product takes three-dimensional volume work of art. Designs for the embroidery machine will facilitate the adornment of the exterior of future quilted products. The presented Quilt Block machine embroidery design Peacock color is suitable for creation of various products. Modern designers have expanded traditional application of quilts. Designers create embroidered quilted jackets, down-padded coats and skirts for adults and children. The graceful pattern includes 7 soft and deep colours. But real fans of creative needlework can change the offered colouring. The drawing will look more impressive if you use it as a border for bed linen, table textiles. In this case it is appropriate to execute it in the same colours. For example, embroidered by gold, the drawing will add luxury to the interior. Silver shades on a light main background will give a special refined style to the room. If the embroidery takes dark deep shades, the decorated unit will get an attracting attention accent. By means of this design you can create a decorative wall panel in the drawing room or in the bedroom. At the same time the decor size can be different: In this case it is possible to combine various sizes of the machine embroidery on one panel.

It is good practice if you ever want to move on to doing special designs in specific shapes, blocks and spaces. For any design you decide to use I recommend doing a test stitchout on a sample quilt sandwich before doing it on the real thing. This is the best way to test your tension! Wrap some tape around the sides of your hoop sticky side out. Put some masking tape on the bottom of the hoop to cover the sticky area. This will prevent the hoop from sticking as the embroidery arm moves your hoop around. The only sticky part you want is on the top of the hoop where the fabric will be laying. I also use binder clips when I can. So I put some masking tape on the insides of the binder clips to make it grip the fabric better. Printing out your design can be done in most basic embroidery programs. Stitch Era Universal is a good, free embroidery program. I also use Sew What Pro for simple merging, placement and printout of designs. Look in your embroidery program and locate your starting stitch. Mark this with a highlighter. Trim the printout to the edges of the stitching. If you are just starting a new quilt I recommend beginning in the middle and working your way out. Treat it like you would any other free motion quilting project. Part of the quilt is already quilted " you can kind of see it on the left and top edges. I line up my design as close as possible without overlapping and pin my design. Now move your fabric around in the hoop until the starting mark on the printout lines up with your needle. Press down on your quilt sandwich so that the taped edges of your hoop grip the fabric. I also clip the top and bottom edges of my hoop. If your hoop is deep enough you can clip it so the clips stand straight up and down. See what works best with your machine. Start quilting your design after pulling up the bobbin thread. Closeup of one of the stitch out areas. What do you do about that?? Again line up your printout with the edges that are already quilted. It gives you more room to play. Pin your design in place and start shifting your fabric onto the hoop. Line up your sandwich so that the starting mark is underneath your needle. Smooth out and press down your sandwich on the edges so the tape adheres and clip the top or bottom where there is sandwich available to clip. It is best to have three edges clipped so the hoop moves the fabric properly. Now watch your needle on your machine as you advance your design. What you want to stitch out are the parts that touch the top of your quilt. You may want to use some spray adhesive if you find this to become an issue. I just slow down my machine and hold the edge down with a stiletto. Once you are finished you have a design quilted out to the edge! I hope you found this helpful!

### Chapter 4 : Machine Embroidery For Quilting - Quilting

*Creating machine embroidery that will be quilted is a fun and challenging endeavor. No matter the size of the project, planning is the strategic factor to success. Photo via Sarah Vedeler Key elements in the design process include determining the purpose of the quilted object, the type of machine.*

First Episode Highlights During the first program of this series, Denise and I detailed how to piece simple blocks using an embroidery machine. If you missed that episode, [click here to watch!](#) All the blocks are precisely stitched with amazing accuracy because the size of the blocks are programmed into the embroidery design. Highlights from the Second Episode Determine the layout of the blocks. For the Simple Shadow blocks, there are three design options. Stress-Free Hooping Positioning the three layers of a quilting sandwich—backing, batting, and pieced top—“evenly into a hoop might seem tricky at first glance! Not so, with these techniques. Spray baste the layers together Tape backing to tabletop, wrong side up. Lightly spray baste the backing fabric with KK Lightly spray baste the batting. Position pieced top; right side up. The quilt sandwich is ready to hoop. Fuse-tack the layers together. Choose a quilting embroidery design There are 24 quilting designs available with the book purchase. The two designs that were used to quilt the layers together of this lap quilt are featured below. There are other embroidery designs that are digitized for machine quilting. This block has a seam at the center, which eliminates this step. Add double-sided basting tape to the underneath side of the inner hoop. Can you see the shadow of my hoop earring in this shot? The photo was hurriedly taken at the studio during a recording day! Position hoop on fabric, aligning crossmarks of hoop with wash-away marks on fabric or cross-marks on template. Place outer hoop underneath the quilt sandwich; loosen the screw. Insert inner hoop into the fabric. Remove template if a template was used. Rather than detail all the steps, watch Denise and I make the quilting magic happen.

## Chapter 5 : Quilt Block Machine Embroidery Designs

*Learn how to embroider quilts with this free guide to embroidery stitches and machine embroidery projects! The expert stitch machine embroidery and quilt artists in this free eBook will teach you: The basics of free-motion embroidery, including what feet to use.*

It is much easier to quilt each block of your quilt before you join it together. Quilting a large completed quilt in the hoop, even with the longer arm machines can lead to all sorts of problems. The weight and bulk of the quilt could easily impede the movement of the embroidery arm. Keeping the parts of the quilt, not being embroidered, clear of the embroidery area would be very difficult. In short, I would not recommend attempting large quilts in the hoop. Having said this, smaller quilted projects, such as table runners, small throws and individual blocks are easily machine quilted in the hoop. I will post next week on how to join your blocks after quilting. The thickness of your wadding will determine how you hoop. The wadding itself assists in stabilising, but depending on your design you may need to add additional stabiliser. The heavier weight solvy should be fine. I recommend doing a basting stitch to hold the layers together. Use a fine needle, so that you are not left with needle marks when you remove the basting. No additional stabiliser should be necessary. This ensures that the bobbin thread does not pull up to the top. However this results in the top thread being pulled to the back. I did a sample with the default embroidery tension using green thread on the top and red thread in the bobbin to illustrate. The top looks fine, butâ€¦. The top tension is normally somewhere between 3 and 5 when not using the embroidery function. Check what your machine defaults to when not embroidering. Hoop up for a test sew using the same weight thread, fabric, wadding and stabiliser that you will be using in your project. Increase your top tension to the default for normal sewing. Sew part of the design and check the back. Fine tune if necessary and continue the design. When you are happy with the result you are ready to commit to your project.
