

### Chapter 1 : How to open Windows or 8 Control Panel (run, find, start)?

*# Open the Control Panel over the Win-8 or Win Start Menu. Press the button [Windows-Logo] on your keyboard. In the Windows-8 Start Menu simply type the text "Control Panel" and then confirm by pressing [Enter].*

In limited cases, the tools can be used to manage roles and features that are running on Windows Server R2 or Windows Server. Some of the tools work for managing roles and features on Windows Server. The following tools can be used to manage roles and features that are running on Windows Server R2, but are not supported for managing roles and features on Windows Server. Remote Server Administration Tools for Windows 8. Download and install the version that matches the architecture of the computer on which you plan to install the administration tools. If you are not sure whether your computer is x or xbased, see How to determine whether a computer is running a bit version or bit version of the Windows operating system. If the system UI language of your Windows 8. Remove all older versions of Administration Tools Pack or Remote Server Administration Tools—including older prerelease versions, and releases of the tools for different languages or locales—from the computer before you install Remote Server Administration Tools for Windows 8. Only one copy at a time of Remote Server Administration Tools can be installed on a computer. If you have upgraded to Windows 8. Earlier releases of Remote Server Administration Tools such as those for Windows 8 are not available--nor do they run--on Windows 8. To use Server Manager to access and manage remote servers that are running Windows Server or Windows Server R2, you must install several updates on the older operating systems. For more information about requirements for using Server Manager to manage remote servers, see Manage multiple, remote servers with Server Manager. Install Instructions To install supported language packs when the system UI language is not supported by the download package Follow instructions in KB to install supported Windows 8. Be sure to install one of the language packs that is supported by RSAT as described in the System Requirements section of this page. On the Start screen, type language to search for language settings. In the search results, click or tap Add a language to this device. On the Time and Language page, under Languages, click or tap Add a language. Select and install a language that is supported by RSAT. When the language pack installation is complete, verify that the language pack is installed by running `get-windowspackage -online` in a Windows PowerShell session that has been started with elevated user rights Run as Administrator. The language pack entry starts with the following: You can either run the installer from the Download Center website, or save the download package to a local computer or share. If you save the download package to a local computer or share, double-click the installer program, Windows8. When you are prompted by the Windows Update Standalone Installer dialog box to install the update, click Yes. Read and accept the license terms. Installation requires a few minutes to finish. In this release of Remote Server Administration Tools, all tools are enabled by default. There is no need to open Turn Windows features on or off in Windows 8. To turn off specific tools On the desktop, hover in the upper right corner of the screen, and then click Settings. On the Desktop menu, click Control Panel. Clear the check boxes for any tools that you want to turn off. Click OK, and then close Control Panel. Under Programs, click Uninstall a program. Click View installed updates. When you are asked if you are sure you want to uninstall the update, click Yes.

**Chapter 2 : Why no "open with" in Windows 8? - Microsoft Community**

*A. Windows now gives you the option to start out in the familiar old desktop environment instead of landing on the Start screen when the computer boots up, but the setting is not the easiest.*

How to start control panel in windows 8. How to open control panel on windows 8. How to open start in windows 8. How to use cmd to open control panel from boot? How to open control panel by command windows 8.

### Chapter 4 : How to Open PC Settings in Windows 8 & Windows 8.1 « My Digital Life

*Update, October 21, This post was updated to reflect a change in the description of the setting, in the final release of Windows 8.1 The Windows 8 Start screen is a good starting point for.*

For a long time this has been achieved by pressing the F8 key, this all changes with Windows 10 and its Automatic Repair mode. But what if we want Safe Mode? If you mash the F8 key at just the right time or get lucky spamming the key during boot up, Windows might still take you to a screen that lets you get into the recovery environment. The trouble is that some computer manufacturers disable this option. And even on PCs that still support it, Windows startup and particularly the handoff between the regular boot process and Windows startup happens so much faster now, you barely have time to press the key. The good news is that getting into Safe Mode is doable. The process is just more hidden now. This article is written using screenshots from Windows 10, but the techniques work pretty much the same way in Windows 8. Get to the Advanced Troubleshooting Tools in the Recovery Environment Most of the ways you access Safe Mode involve getting into the Windows recovery environment first. The recovery environment includes a number of troubleshooting options, and Safe Mode is one of them. How you get there depends on whether your PC can start Windows normally or not. **If Your PC Can Start Windows Normally** If your PC can successfully get to the Windows login screen when you start it up or you can actually sign into Windows, the easiest way to get to the recovery environment is to hold down the Shift key while clicking Restart either right on the sign in screen or from the Start menu. You can also get to the recovery environment through your Settings app. Safe Mode is included in those tools. Press the number corresponding to the startup option you want to use. Use the arrow keys to select the appropriate Safe Mode option, and then hit Enter to boot into Safe mode. To start Windows normally again, you have to go back into the System Configuration tool and disable the option. You can even choose the type of Safe Mode into which you want Windows to start: Used only for repairing an Active Directory server Network: Be sure to check out our full guide on how to force Windows to boot into Safe Mode for more information.

### Chapter 5 : Can't open file explorer, windows [Solved] - Computers - Laptop Tech Support

*How to Open PDF Files on Windows 8/ In general, when you want to open pdf documents on your computer, you need to download a pdf reader such as adobe reader in advance. However, the good news in this article is that you are able to use the built-in Reader app on Windows 8/ to open pdf files.*

Update to Windows 8. Before you begin, here are some things to keep in mind. Your files, desktop apps, user accounts, and settings come with you. As part of the update, we check your current desktop apps and connected devices. Consider using a Microsoft account to sign in to your PC. If you already have an account you use with Outlook. You can keep working while the update is installing. Download and installation times vary from about 30 minutes to several hours, depending on your Internet connection speed and the speed and configuration of your PC, but you can still use your PC while the update is installing in the background. Prepare your PC There are a few things you should do before you start installing: Back up your files. Make sure you have enough free disk space. Plug in your laptop or tablet. Connect to the Internet. Get the latest critical and important updates. In most cases, the latest updates will be installed automatically using Windows Update. Temporarily turn off your antivirus program. Some antivirus software might interfere with the installation. Get the free update You can download the free update from the Windows Store. Go to the Start screen, and select the Store tile. The update will download and install in the background while you use your PC to do other things. In some cases, the installer might find something you need to take care of before you can continue installing the update. Note If the installation is interrupted for any reason, you can restart the update from where you left off by going back to the Store and downloading the update again. Or you can restart it yourself. Restarting will take longer than usual—“from 20 minutes to about an hour”—while the update is applied. To accept these settings and continue, select Use express settings. You can change any of these settings later, after you finish setting up. For more info, select Learn more about express settings. To learn about how these settings affect your privacy, select Privacy statement. If you already use a Microsoft account to sign in to Windows 8 or Windows RT, your account name will be filled in for you. If you previously used a local account, you can still use it to sign in If you have a Microsoft account Enter your Microsoft account email address, if needed, and your password. This helps us protect your account and devices when you access sensitive info. If you have a local account To sign in with your local account, enter your password. You can always connect to a Microsoft account later, and we recommend giving it a try. Simply put, your Microsoft account is the glue that holds together so many useful features of the new Windows. Photos you take with this PC are saved to your camera roll folder on this PC, and a smaller copy of each photo is automatically backed up to your OneDrive. When you create a new document, the default save location is OneDrive. But you can always choose to save individual documents locally or on another drive. Windows will save a backup copy of your PC settings to OneDrive. If something ever happens to your PC and you need to replace it, your settings are saved in the cloud and you can transfer them to a new PC instantly. You can change any of these settings later in PC settings. Downloading and installing these updates might take a few minutes, depending on the updates you need. Your PC might also need to restart one or more times to complete the updates. You can see all of the Windows Store apps you own in the Your apps section of the Store. From here, you can choose the ones you want to install on your updated PC and install them all at once. On the Start screen, select the Store tile to open the Windows Store. Select Account, and then select My apps. Select all the apps you want to install, and then select Install.

### Chapter 6 : Starting Windows PowerShell | Microsoft Docs

*There have been cases reported where for some users, Change PC Settings option will not open in Windows or Windows 8. Here are a few troubleshooting steps you may want to try, and see if.*

### Chapter 7 : How to Boot Into Safe Mode on Windows 10 or 8 (The Easy Way)

## DOWNLOAD PDF OPEN ON WINDOWS 8.1

*This article describes an issue that occurs after certain updates are installed in Windows RT , Windows , or Windows Server R2. You can resolve this issue by applying the update in this article.*

### Chapter 8 : How to Open PDF Files on Windows 8/

*How to Boot to the Desktop in Windows Open the Windows 8 Control Panel. Doing so from the Apps screen is probably the quickest way via touch, but it's also accessible via the Power User Menu if you're used to using that.*

### Chapter 9 : How do I open Windows Media Center in Windows ? - Microsoft Community

*Just install it open CMD get to C:\Program Files\Git\usr\bin and enjoy theinnatdunvilla.com right from the Windows prompt or better yet append the path to your PATH environment variable so you can use it from any directory.*
