Pictorial Library New Features: Maps Part 2 Post by A. Riddle Two days ago, we highlighted the brand-new maps which are included in the revised Pictorial Library of Bible Lands. Today, we will illustrate some of the steps involved in creating the maps. The key to making a map is layers. One layer contains all the dots and names of sites; another layer includes rivers and wadis; the terrain is yet another layer; and so forth. Each of these layers of data has first to be created or obtained from somewhere, and then they are compiled into a map. The base maps are created from a DEM, or digital elevation model. A DEM is like a digital photograph from your camera, except each pixel records an elevation. From this one DEM, two separate images are generated: Then, the sea was colored blue. Grayscale hypsometric tint replaced with color hypsometric tint. Colorized sea with coastal "glow. Hypsometric tint and Hillshade blended. After the base map is completed, it remains to add all the streams, lakes, sites, and other lines and dots that make up the map. The linework and dots began by looking like this. Linework and dots to be added to the map. Linework and dots overlaid on the base map. The final step is to "clean up" all the lines and dots and add name labels. The linework is given the right colors, widths and sizes, and any unnecessary elements are removed. The final map comes out like this. The Jerusalem maps are special. The map was scanned, and then colorized by Bill Schlegel. We added the pools, lines and labels. The Missing Map As a final note, when the revised Pictorial Library of Bible Lands was first released, we were not able to include a map of the island of Patmos , because the resolution of the NASA data was too coarse--the island is simply too small. Here is what it would have looked like. Pixel resolution is 3-arc seconds, i. Pixel resolution is 30 meters.

Chapter 2 : Pictorial Library of the Bible Lands: Samaria and the Center 2 by Todd Bolen (, CD-ROM) | eBay

Chapter 3 : BibleX: Pictorial Library of Bible Lands

The Pictorial Library of Bible Lands is an volume collection of high-resolution photographs of important biblical and historical sites in Israel, Jordan, Egypt, Lebanon, Turkey, Greece, and other countries.

Chapter 4 : Pictorial Library of Bible Lands: Cultural Images CROSSGRADE

"The Pictorial Library of Bible Lands is unsurpassed. I have used other Bible image DVDs only to be disappointed in their low-resolution images, poor quality graphics, and limited content selection. This is a great service to Bible educators by providing excellent quality graphics of Bible land images that are ready for adaptation to word.
