

Chapter 1 : The Essentials of Respiratory Therapy | Anesthesiology | ASA Publications

"The Essentials of Respiratory Care" book is one heck of a book! I have used it for many years as a Registered Respiratory Therapist. Now, I am entering my 3rd year of medical school- I still use this book VERY OFTEN as a reference!

Upon successful completion of written and oral examinations, an individual was designated as a Registered Inhalation Therapist. To advance the art and science of medicine by promotion of the understanding and utilization of inhalation therapy in the prevention and treatment of human ailments. To assist in developing and maintaining educational and ethical standards in inhalation therapy for the public good, for the advancement of medical care, and for the professional guidance of registrants of the Registry. To establish standards by which the competency of inhalation therapists to administer inhalation therapy under the prescription, direction, and supervision of licensed physicians may be determined. Written and oral exams were required. The First Ten— The first ten individuals in the United States to become registered inhalation therapists are listed. It shall participate in the establishment of the goals and objectives for the Association and participate in the governance of the Association. Over the next five years, over 10, practitioners were recognized as certified technicians. The NBRT offered two credentials: A Model Practice Act was developed. The second specialty credentialing exam offered was for the registered pulmonary function technologists RPFT credential. In addition to the exams for pulmonary function technologists, the NBRC later added specialty credentialing exams for neonatal-pediatrics, adult critical care, and sleep disorders specialists. The knowledge and skills of the technician are acquired through formal programs of didactic, laboratory, and clinical preparation. Congress banned smoking on flights of two hours duration or less. As a result, smoking was banned on all domestic flights in USA. Over 25 years later, more than individuals have benefited from the rotation and hundreds more AARC members have supported the program. The Respiratory Care Accreditation Board was formed. After numerous focus groups and input from the BOD, HOD, and general membership, the nominations process for Directors and Officers was modified, the roles of BOD Officers were changed, the number of seats on the BOD were expanded to include Directors from the larger Specialty Sections, the number of standing committees were reduced, and consultants to the BOD were identified. A Transition Committee was established to transition to new accreditation agency. An AARC Fellowship is conferred upon those who have met a standard of excellence in the practice of respiratory care. Through educational achievement, validation of competency through advanced credentials, research initiatives, publication, and clinical initiatives, an AARC Fellow has made a mark as a respiratory care professional of distinction. CoARC now accredits degree-granting programs in respiratory care that have undergone the process of voluntary peer review and meet or exceed the minimum accreditation Standards as established by the professional association in cooperation with CoARC. The Task Force recommendations were shared with the leadership and membership and published in the Respiratory Care journal.

Chapter 2 : Milestones of the Profession

As always, here are the vital statistics: hardcover, pages, 46 chapters, 3 editors (authors) and 13 contributors, all of them respiratory therapists. It is a large and heavy book, not one of those little quick reference jobs for your lab coat pocket.

Back to top Verified Credentials Students will sign up for a criminal background check and immunization tracker package through Verified Credentials. Directions will be provided after acceptance into the program. Some clinical rotations begin as early as 6 a. Back to top Physical, Intellectual, and Social Requirements Students and graduates must be able to function as safe practitioners. Patient safety is a major concern for establishing requirements for capabilities of students. Collection, evaluation and synthesis of data are vital to this discipline. In addition, there are professional attributes that are required by the profession. All of these are every bit as important as the knowledge and skill. The therapeutic modalities provided by respiratory care practitioners require technical skills involving manual dexterity and a mechanical aptitude to perform in a safe and acceptable manner. Respiratory therapists must be mobile and have the ability to operate in relatively small spaces. These requirements are necessary because of the critical and accurate care that is often provided in crisis situations. To make sure these requirements can be met, the Respiratory Care Program at Tacoma Community College has come up with the following technical standards: Requirements The Respiratory Care program at Tacoma Community College will make every effort to provide the physically compromised student the opportunities to learn and develop into a safe, rational respiratory care practitioner. It is incumbent upon the student to realize that certain manual, technical, and professional tasks must be mastered in order to achieve passing grades and to successfully complete the respiratory therapy curriculum. Expand All Collapse All Physical Demands Respiratory therapy students must be able to display the medium strength rating, as described by the Dictionary for Occupational Titles, which reflects the ability to exert the following amounts of force to move objects: Respiratory Therapy students must possess: For this reason, candidates for admission to the Respiratory Therapy program must have manual dexterity and the ability to engage in procedures involving grasping, pushing, pulling, holding, manipulating, extending and rotating. Examples of such procedures would include, but not limited to: Draw venous and arterial blood Perform endotracheal suctioning Provide percussion and postural drainage for bronchial hygiene Perform manual resuscitation CPR in the event of a cardiac emergency Maintain and modify equipment in routine emergency situations Be able to move life support equipment in a rapid manner during a crisis situation Be sensitive to changes in pressure when performing emergency breathing with a manual resuscitator in the newborn and small infant as compared to the adult victim Possess tactile sensitivity required to perform arterial puncture on the newborn and small infant. Respiratory therapy students must be able to observe patients and be able to obtain an appropriate medical history directly from the patient or guardian. Such observation requires the functional use of vision, hearing, and other sensory modalities. Respiratory therapy students must have visual perception which includes depth and acuity. Back to top Respiratory therapy students must be able to: Communicate in English effectively and sensitively with patients. Communicate in English in oral and handwritten form with faculty, allied personnel, and peers in the classroom, laboratory, and clinical settings. Be sensitive to multicultural and multilingual needs. Complete written assignments and search and evaluate the literature. Use therapeutic communication, such as attending, clarifying, coaching, facilitating, and touching. These skills must be performed in clinical settings, as well as the didactic and laboratory environments. Measure, calculate reason, analyze, and synthesize data. Problem-solving and diagnosis, including obtaining, interpreting, and documenting data Learn to use computers for searching, recording, storing, and retrieving information. These skills allow students to make proper assessments, sound judgments, appropriately prioritize therapeutic interventions, and measure and record patient care outcomes.
