Chapter 1 : How to Convert a Word Document to a Fillable PDF Form | theinnatdunvilla.com

Choose Select a file, navigate to the location where you stored the converted Word document, select the file and choose Open. Leave the form field auto detection set to On and choose Start to create the form from your converted Word document.

Review conversion problems in the Design Checker task pane About converting a Word document to an InfoPath form template When you convert a Word document to an InfoPath form template, the document is used like a blueprint to create a new form template. The basic structure of the document is recreated as closely as possible in the form template. In a Word document, a "form field" is the location where a particular type of data, such as a name or address, is stored. If you choose to include Word form fields when you convert the document, text box, check box, and drop-down list box controls are added to the InfoPath form template at a location that corresponds to the location of the fields in the Word document. In addition, InfoPath automatically detects the parts of the Word document that might work well as repeating tables and rich text boxes, and converts them to the appropriate controls. For example, if an expense report document includes a blank, underlined area in which users can type notes about a particular expense, InfoPath will convert that area into a rich text box. Users can then type multiple lines of text in the rich text box, and format that text as appropriate. To better understand the relationship between a Word document that you convert by using the InfoPath Import Wizard and the resulting InfoPath form template, imagine that for the past several years your organization has used a Word document called ExpenseReport. If you use the Import Wizard to convert ExpenseReport. In the following example, the Expense Details table in the Word document has been converted into a repeating table in the resulting InfoPath form template. The repeating table enables users to insert or remove expenses as necessary by clicking commands on a shortcut menu. When the Word document is converted to an InfoPath form template, the layout and other elements are preserved. By default, the number of empty rows in the InfoPath repeating table matches the number of empty rows in the Word table. However, you can save space on your form template by displaying just one or two rows by default. This new form template contains elements that are similar to those found in the Word document, such as the table for collecting expense information. However, depending on the settings that you choose in the Import Wizard, some features may differ in the resulting form template: However, any form fields from the original document, such as the Name text box, Department drop-down list, and Division check boxes, are discarded from the resulting form template. Any form fields from the original document, such as the Name text box, Department drop-down list, and Division check boxes, are converted to the corresponding InfoPath controls. For example, you can disable the option for converting empty table cells in the document to text boxes in the resulting form template. Top of Page Word features and settings that are not fully supported during conversion Some settings and formatting in Word documents are not supported in InfoPath form templates. When you convert a Word document that contains such settings, the resulting form template will not contain those features or settings. For example, if your Word document has revision marks, the revision marks will be discarded in the resulting form template because InfoPath does not support this feature. You can use the Design Checker task pane in design mode to discover any problems with the conversion. You can then take action to correct those problems. The following is a list of features and settings that are not preserved when you convert a Word document to an InfoPath form template. In some cases, formatting is discarded but the underlying text is preserved. For example, if you have newsletter-style columns, InfoPath will discard the columns, but import the text contained in those columns.

Chapter 2 : how to turn a word document into a fillable form - Microsoft Community
