

Chapter 1 : Vu+ Solo2 User Manual

Here are the English manuals of Vu+ Uno and Ultimo.

Press Blue button on the remote control and then Blue button again and select BlackHole SpeedUp, select which options you want to disable and then press Red button to save and reboot the receiver. But at 35 seconds default boot I did not bother to test this. The picture quality is great. Certainly much better than the GigaBlue Quad when it was released. If you need p24, p25 or p30 you can do this with the auto resolution plugin. Channel zapping is really fast and you can of course play around with the on screen graphics look by downloading and changing skins. One thing is still slow and that is the channel searching also we are missing blind scan option. But perhaps there is a plugin for that. This is excellent and what we expect from a second generation device like this. PVR and Multimedia playback The twin tuner PVR works as advertised and of course you can watch 1 channel and record another at the same time. All recordings are of course saved into. Do not expect every file format out there to be supported. But common mp3, flac, avi and mkv files are handled pretty well. On the BlackHole Image you do this via the plugins panel green button , activate the Opera browser and enter the URL using the remote control. One really miss a keyboard and a touch pad for this so the browser is probably most useful for Hbb-TV support. It works both inside and outside of the home network, therefore it also works over the internet, if you have the correct ports open in your router. It also works via 3g if your connection is good enough. Check our detailed guide on setting this up here. This is still in a beta stage but seems pretty stable already testing it through the WebInterface with an iPad al though the quality was not the best. Also the audio sync seems a bit off. I guess there work to be done on this feature still and to be fair it is only labeled as beta at this stage. The receiver seems stable even at this early stage and it will be interesting to follow the transcoding function developing more in the coming months.
