It was probably the first poem I read for myself, tempted by some bold, cartoony illustrations. But no one who ever read the poem could fail to recall the names of those "fishermen three". Wynken, Blynken and Nod are slightly foreign, yet familiar, and immensely satisfying sounds. They are almost mini-characterisations in themselves. This separation insists that each name is fully relished. It turns the print on the page into a voice. That "Nod" is left unrhymed reveals perfect pitch. Field was born in St Louis, but the poem has an old-country feel. They also save the poem from dissolving into sweetness, the "wonderful sights" and "beautiful things" which might grate on the modern reader. Field is not wildly imaginative, of course: But he is imaginative enough: The last stanza, of course, is the one that might cause a squirm. It spells out the metaphor, perhaps needlessly. Is it a little too tender? The explanation about eyes and head might suggest an accompanying touching-game though that would surely be risky if you wanted the child to settle down. Better still, it was accompanied by another old favourite by the same author, A Duel, in which a gingham dog and a calico cat have a furious fight and devour each other to the last shred. He seems to have had fun producing what he called "paraphrases," using a sort of synthetic Middle English. There are other adult poems with a characteristic bitter-sweetness, such as A Fickle Woman a poem which also uses sea-imagery, to somewhat different effect: Hands up, younger generation, if you never read it! A lullaby should lull, and the sense of a safe, solid adult world around the child is not to be despised.

Chapter 2 : Wynken, Blynken, and Nod by Eugene Field - Poems | theinnatdunvilla.com

The Winking, Blinking Sea " this excellent book explores the rarely seen yet quite abundant luminescent sea life found deep in our planet's oceans It would be a benefit to any school or class library."

Biography[edit] Born in in Smithfield , Virginia, Batten grew up in a farm, where, as a child, she learnt about nature by playing in the woods and near the forest streams. In an interview, she revealed that she had wanted to become a writer since she was a child. A at Columbia University in In , Batten published "Sexual Strategies: How Females Choose Their Mates," which became one of her most successful books. This book, about the powerful role female mate choice plays in evolution, was released in an updated edition in In , Batten published Anthropologist: Batten has written many nature documentaries for television, including the Wild, Wild World of Animals series. Until , she was editor-in-chief of Breastlink. Science and the Unexpected Ants, Ants, Animals and Plants The Twenty-five Scariest Hauntings in the World Shark Attack Almanac, illustrated by Carol Lyon How Females Choose Their Mates ; The Winking, Blinking Sea: All about Bioluminescence Creatures of the Past Scientist of the People Animal Fathers and Their Babies Who Has a Belly Button?

Check it out on www. You can find out in my new book: So do all other mammals, but they sleep in different ways. Diurnal animals sleep at night like we do and are active during the day. Nocturnal animals, like bats, owls, and mice, sleep during the day and wake up at night. Birds sleep, too, and some can actually sleep while they are flying. You can find out which ones in my book. Bears and ground squirrels go into a deep winter sleep called hibernation. I am very proud that my book about invasive species is now in every 4th grade library in every public elementary school in the five boroughs of New York City. The program about me was originally broadcast on March 8, Videotapes are available from the Fairfax Network. I write science books for adults and children, television documentaries, and magazine articles. My work deals with human behavior, ecology, animals, plants, health, disease, stars and galaxies – anything and everything in the natural world. I feel very lucky to be a science writer because I can follow my curiosity wherever my questions take me. I have been privileged to visit tropical rainforests, astronomical observatories, and medical research laboratories. I have had the opportunity to meet some of the most insightful, creative scientists on Earth – people who have generously shared their work and their friendship with me. They are too numerous to mention individually, but I thank them all. The variety of life on our beautiful planet is extraordinary. The intricate interactions among animals and plants in the real world are far more fascinating, wondrous, and bizarre than those any fiction writer could possibly invent. Imagine fish that change sex, plants that trick and seduce insects, animals that have both male and female genitals. All of this happens, some in your own backyard! My first "field station" was the peanut farm in Smithfield, Virginia, where I grew up. I played in the woods, waded through forest streams, and learned to respect and appreciate animals, plants, and the cycle of seasons, planting, and harvesting. I believe there is something in all of us that yearns for wild nature because it is in wilderness that we can feel a connection with our ancient hunter-gatherer past encoded in our genes. In my books, I try to convey the excitement I feel about our extraordinary planet, the diversity of life, and the responsibility that humans have to care for the other species with which we share our global habitat. Peachtree ; Aliens from Earth: Ants, Ants, Animals and Plants T. My magazine article for Science Digest, "Sexual Choice: Until recently, I was editor in chief of Breastlink. This was also extremely satisfying work because we were providing information about new research and therapies that can help people to make more informed decisions about breast cancer treatment. My family are all in the arts:
